Orion Governance announces significant momentum with Healthcare, Banking and Retail customers

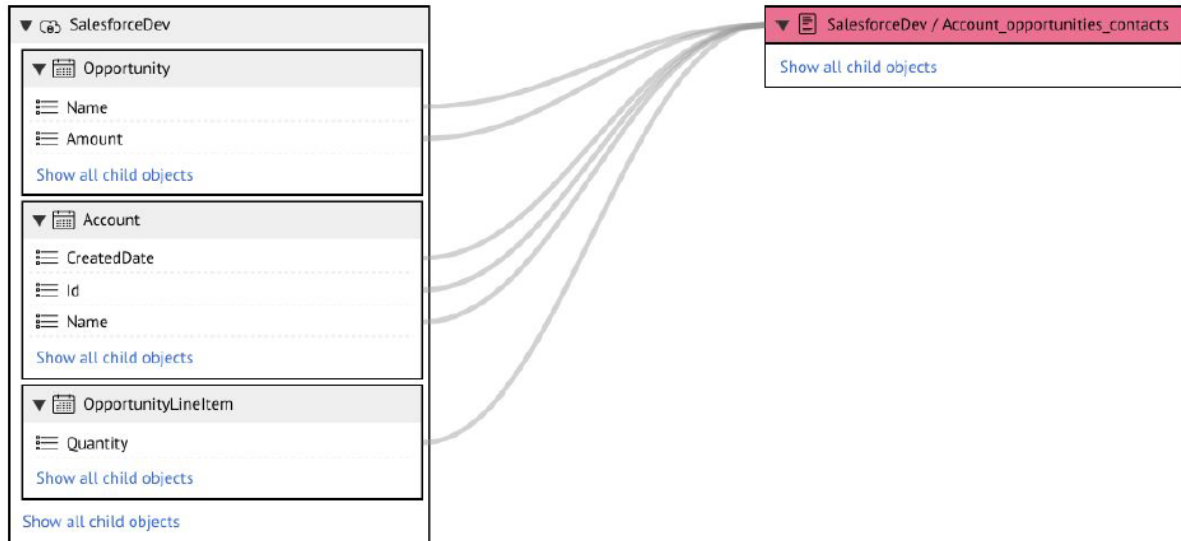

SAN FRANCISCO, [August 7, 2018] –
Orion Governance today announced significant momentum with Healthcare, Banking and Retail customers at Dreamforce 2018.

Orion Governance continuously innovates with new capabilities and platform features, and is proud to announce adoption and interest on SAS Base and DI scanners, Salesforce and Mainframe metadata harvesting, brand new semantic lineage capabilities as well as a lineage reporting geared towards data stewards and business users. Below are a few highlights:

- SAS Base and DI scanner processes SAS macros and scripts to provide detailed metadata and lineage
- Orion metadata harvester processing custom objects, process builders, Apex programs or reports to connect and display data across your enterprise.
- Harvesters to ingest JCL/COBOL/IMS extracts provides significant detail, covering jobs, programs, steps, paras, utilities (easytrieve). The system displays over 100 metrics across platforms, dramatically easing the discovery process!

- Finally Business friendly lineage – search by a field or business term, understand how your data assets are linked through business terminology that gets automatically mapped into your technical assets – providing the ability to unravel what was previously impossible.

Sample: Data Lineage from Objects (standard or custom) to Custom Report

Orion Governance is a **Silver Sponsor at Dreamforce 2018**, the most innovative software conference of the year. Orion is exhibiting at booth #1940 in the Dreamforce Customer Success Expo, showcasing how to accelerate data discovery for better governance using deep metadata harvesting and lineage insights across a multitude of platforms including Salesforce.
