

Metadata Harvester

Orion Governance offers a disruptive new Data Governance software solution in MetaData Harvester (MDH), helping companies trace how their heterogeneous information assets are interconnected, all in the context of their business vocabulary.

Orion's automated solutions help mitigate operational risk through increased data transparency and ensure compliance with data driven regulations like GDPR, BCBS-239, HIPAA, and Solvency II.

Orion's tools are based on data lineage, mapping information assets to business and technical glossaries; with zero impact on production systems. For the first time, banks, insurers, healthcare providers, retailers and other large enterprises can ensure compliance with numerous regulations, and in addition trace detailed data lineage and data sensitivity information across the disparate widely used technology platforms. Orion MDH provides the clear, accurate visibility into data and processes, that until now has been just a dream. Orion is growing fast and is partnered with IBM, Hitachi Vantara, Alation and Collibra. Orion customers include some of the largest banks, retailers, healthcare and financial service companies in the world.

Gain Insight

Orion Governance provides a unified, comprehensive and holistic understanding of your structured (and now... unstructured information) giving the business end-to-end visibility of how information moves across the various IT systems such as for Data Lineage, Data Sensitivity, Access Exposure and Impact Analysis.

Our Machine Learning based "stitching" algorithms seamlessly connect terms in your business/ technical glossary in an automated fashion to your data assets creating comprehensive lineage, to be visually explored and exported.

Stay Compliant

We help our clients deal with complex data driven regulations. Ranging from Article 30 in GDPR, to Principle 2 in BCBS 239 etc. MDH specializes in providing technical lineage and data transparency regardless of technology, to help organizations meet compliance requirements.

Reduce Risks & Costs

Technology environments become very complex over time making data governance a significant challenge, and sometimes even raise barriers to modernization and change.

Orion MDH helps reduce complexity by highlighting duplication and redundancy of information assets across your heterogeneous environments, simplifying the path to change and modernization. Providing the ability to perform an automated impact analysis of an information asset that needs to be upgraded or retired, is a unique capability out of the box.

Future Proof Governance

Orion MetaData Harvester (MDH) harvests all your existing data assets, and integrates with 40+ different technology platforms through an open architecture, equipping companies with incredible choice and flexibility.

Our light weight deployment gets you up and running in hours and days, not weeks and months!

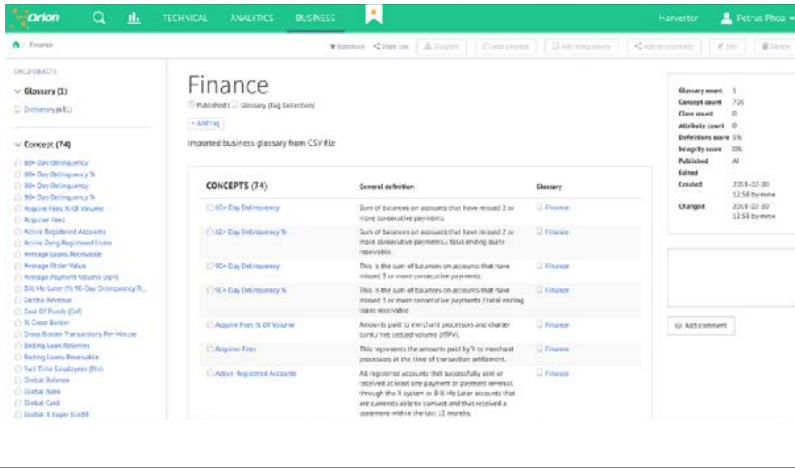

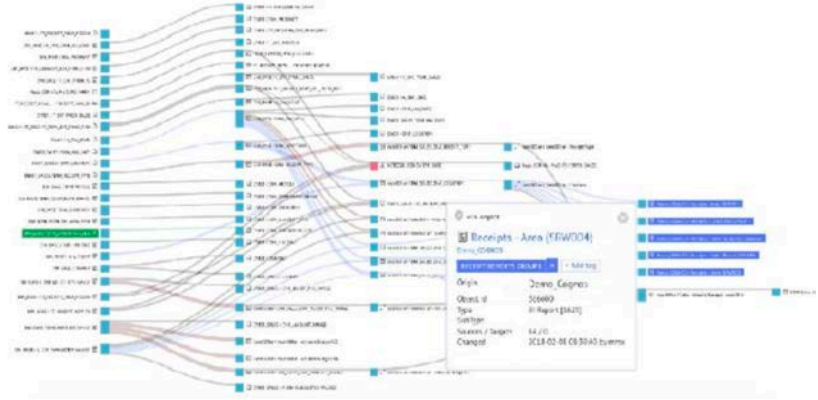

Unified Governance
End to End information flow
Structured information
Unstructured information

Regulatory Compliance
GDPR
BCBS 239
Solvency II

Operational Risk
Reduce Complexity
Migration & Licensing
Impact Analysis
Data Lineage,
Sensitivity,
Access exposure

Open Architecture
3rd party integration
Rest API
Agnostic Platform

View and discover lineage, mapping and dependencies that you never knew existed. Drill into field level detail!

View business glossaries linked to your information assets providing much needed relevance and context for Information.

Orion Metadata Harvester provides a full visual view of all mapped information assets, providing unparalleled visibility into where enterprise data moves through the technology ecosystem – Databases, Big Data platforms, ETL tools, Java, JCL/COBOL, Reporting and BI tools to name a few. The system displays over 100 metrics across platforms, dramatically easing the discovery process!

About Orion Governance

Corporate mission of Orion Governance is to provide solutions that accelerate the adoption and implementation of Information Governance. Orion MetaData Harvester automatically scans source systems for metadata and stitches in real time into one holistic information-asset landscape to enable comprehensive data governance.
