

Orion Governance offers the Enterprise Information Intelligence Graph (EIIG), a premium metadata management solution. EIIG provides the platform for enterprises to visualize, analyze and optimize their information assets in near real-time. EIIG insights help eliminate organizational silos, propagate data trust, security, compliance and migration.

The EIIG platform provides near real-time information on information assets (quality, duplication, impact, lineage, tribal knowledge) by activating the metadata gathered at a DNA level and connecting it together automatically out of the box. This promotes hyperawareness, trust and informed decision making.

Orion's EIIG is used by a number of Global 5000 companies in banking, insurance, retail, healthcare and technology. We help our customers to discover, catalog, govern and trust their data to fully meet audit, compliance and migration requirements. Our differentiation lies in our technology.

We leverage active metadata to create a data fabric leveraging automation, machine learning and AI, in the most comprehensive (50+ technologies), scalable and mature way, spanning technologies from Mainframe and programming languages all the way to the newest cloud-based frameworks.

Our mission at Orion is to help our customers take control of their information assets within weeks. By combining cataloging, impact analysis, process dependencies, lineage and data trust we reduce the work effort by 90% and help reduce risk exposure.

Why Orion?
